About Section

I am a Python developer specializing in backend engineering and full-stack application development. I enjoy designing scalable systems, building APIs, and creating intelligent automation solutions. Currently, I am working as a Python Full-Stack Developer Intern at Bridgeon Skillversity while building Synthetix OS, an AI-powered workflow orchestration platform that combines agents, RAG pipelines, asynchronous processing, and modern web technologies. My core stack includes Python, Django, Django REST Framework, React, PostgreSQL, Redis, and Celery. I am actively seeking opportunities as a Backend Developer, Python Developer, or Full-Stack Developer.

Recommended Skills

- Python
- Django
- Django REST Framework
- React
- PostgreSQL
- Redis
- Celery
- REST APIs
- System Design
- Git
- LLM Integration
